

Molson Coors Brewing Company

Agricultural Brewing Ingredients Policy

Introduction

Molson Coors Brewing Company (MCBC) commits to source from suppliers or producers, who grow, produce and deliver our agricultural brewing ingredients in a manner that recognizes & embraces Molson Coors quality, safety and sustainability standards.

The Molson Coors Agricultural Brewing Ingredients team oversees the management of our suppliers and producers' compliance with this policy. We will support our suppliers and producers in achieving this by working with them to recognize and adopt the following principles of our policy.

Principles

- Comply with Molson Coors quality specifications.
- Assess and address environmental and social issues that may impact local communities.
- Adopt agricultural practices, and in some cases, produce action plans that strive to maintain soil fertility, water resources, air quality and biodiversity.
- Manage natural resources in an efficient and sustainable manner, including through the measurement of the following areas: yield, land use, water consumption, nitrogen, phosphorous, pesticides, carbon emissions, farm worker management, traceability and assurance, residue and contaminants and soil conservation.
- Comply with local and national environmental laws, rules and regulations, and show sensitivity to environmental issues that may impact local communities.
- Recognize the importance of accreditation and where established adopt accreditation to appropriate farm assurance programs.
- Meet food safety guidelines and traceability specifications.
- Understand and address any future guidelines, best practice, and legislative changes that may arise.

Where these principles are not in place, we will work continually across our global operations with our supplier partners to establish these standards while recognizing local practices.
